**NETS FOR ALL PURPOSES.**

Protection against snow, sand, dust, wind and sunlight. It always depends on the right textiles.

# ALMOST EVERYTHING FALLS INTO THE CLUTCHES OF OUR TEXTILES.

Our experience with durable textiles for outdoor use gave us the idea to develop nets for fences out of the same longlasting material that can easily resist the extreme load of wind and weather. Based on this specific product variants for special use against snow, sand, dust, wind and sunlight developed.

## SYSTEM PROTECT S2 FOR USE AGAINST SNOW AND SAND.

Our nets protect streets, especially motorways, effectively against snowdrifts. The special net is made out of a durable polyester yarn for the use in extreme weather conditions and helps to make winterly dangers in road traffic controllable.

Furthermore our systems protect against sand erosions for example at promenades and against field erosions at motorways or country roads. All our systems are delivered with appropriate accessory like posts and fixing material.

## SYSTEM PROTECT WD FOR USE AGAINST DUST AND WIND.

These nets are the fine blade in the fight against dust and wind. The range of applications is large and very flexible. Both in the major use against erosion and dust as well as in the domestic field like on windows and on balconies our textile systems perfectly defend against wind and dust. In agriculture the most important application is to avoid erosion and fence land and animals. In addition diverse ranges of application arise. In private and commercial gardens our products protect against animals, excavations and many other enterprises.

## SYSTEM PROTECT LS FOR USE AGAINST SUNLIGHT.

The sun is beautiful. But too much sunlight can be disturbing. Our fine textile nets are shady and can ensure a cosy atmosphere in rooms with large window areas. But also plants in greenhouses are protected against too much light irradiation and heat development by our products.
